

Requirements

Functional requirements

- The user wants to rate the video.
- The more a user looks on the heart the rating gets better and better.
- The user wants to see how many hits a video has.
- The user wants to do features of videos by hands and eyes.
- The user wants to watch a video in fullscreen mode without any buttons.
- If the video loads, a progress bar will pop up.
- If the user wants to select a button, he can see a tooltip.
- In the prototype we use the mouse for controlling the user interface. This should be replaced with the eye tracking. At the beginning we can use a mouse delay.
- The user can add a video to his playlist.
- The user can add a video of the video preview to his playlist.
- If the user increases the volume there will appear a volume icon, so that the user knows when he reaches 100% of the volume.
- Index web site:
 - If the user selects a heading, new videos will be appear.
 - With the back-button the user gets back to the index web site.
 - The video preview should be shown horizontal. This enables that more videos can be shown in the video preview than with a vertical alignment.
