

## Back

If the user selects the button „Back“ he gets to the index website.

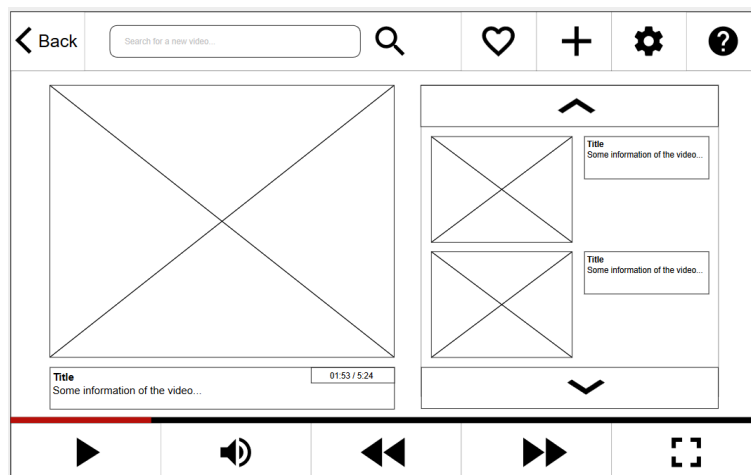

## Search

If the user selects the search function he can select a desired video with the keyboard.

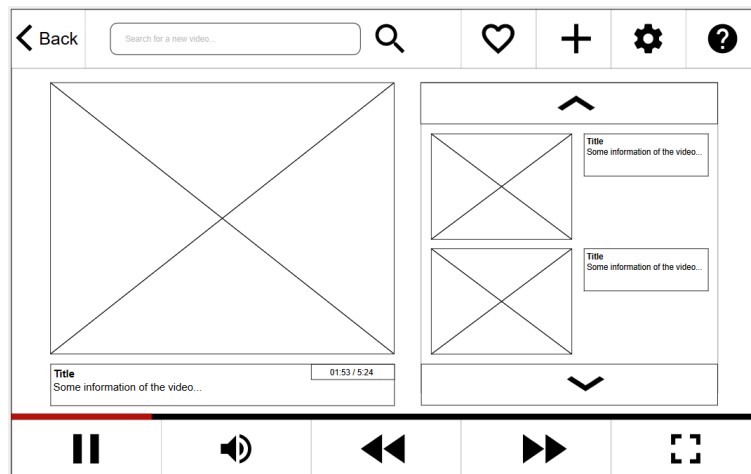

## Play

If the user selects the button “Play” the video starts.

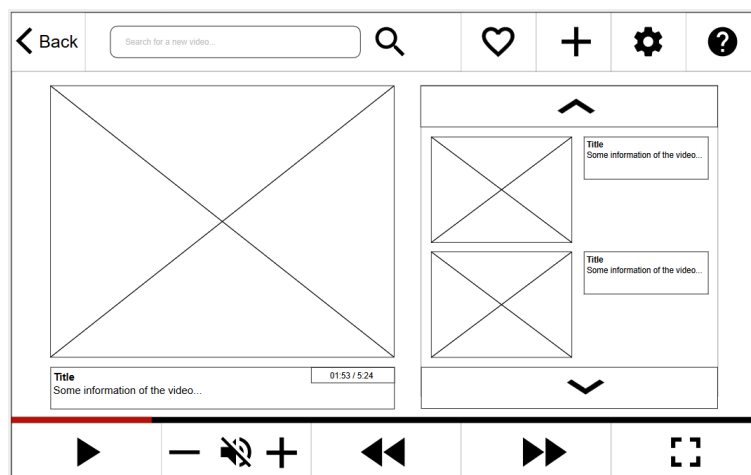

## Pause

If the user selects the button “Pause” the video stops.

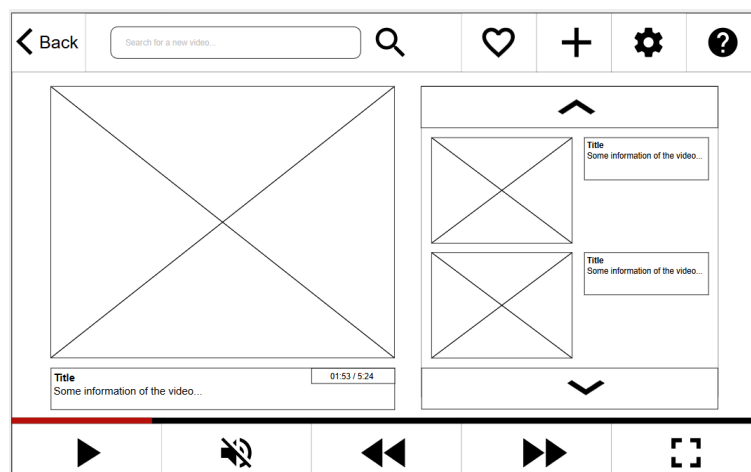

## Volume

If the user selects the button “Volume” the number of icons of the button changes from one to three icons. Now he has the opportunity to select the left icon “Minus”, the middle icon “Unmute” or the right icon “Plus”. The icon “Minus” can be used to reduce the volume and the icon “Plus” can be used to increase the volume. With these buttons the user can adjust the desired volume.

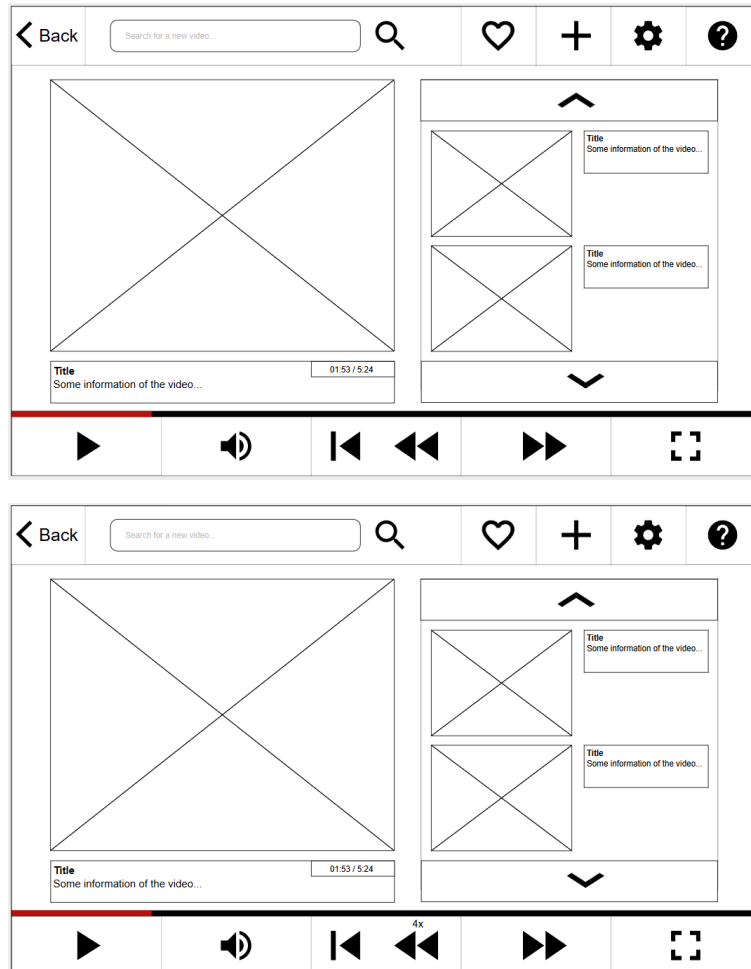

If the user looks at the main content the original icon “Volume” appears again. Unless he has selected the unmute option, the unmute character appears.

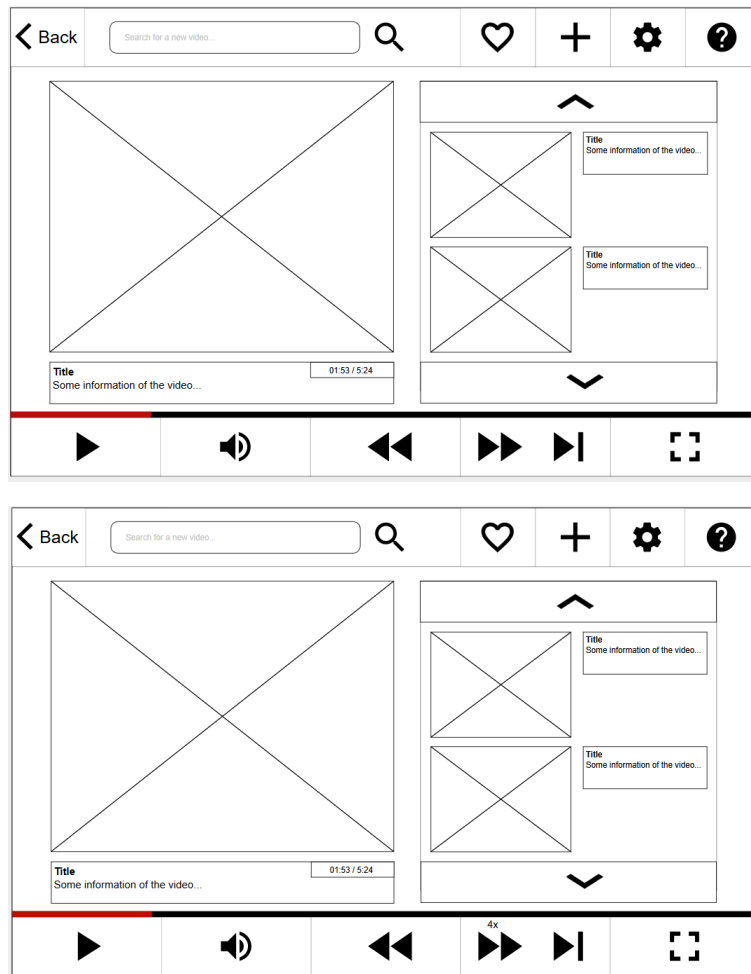

## Rewind

The user can rewind the video. If the user selects the button “Fast-rewind” the number of icons of the button changes from one to two icons. Now he has the opportunity to select the left icon “Skip previous” or the right icon “Fast-rewind”. If he choose the right button with his eyes the video is rewound, while he looks the video until he selects the “Play”-button again. If he selects the left button once the video starts again. If he selects it twice the previous video will be played.

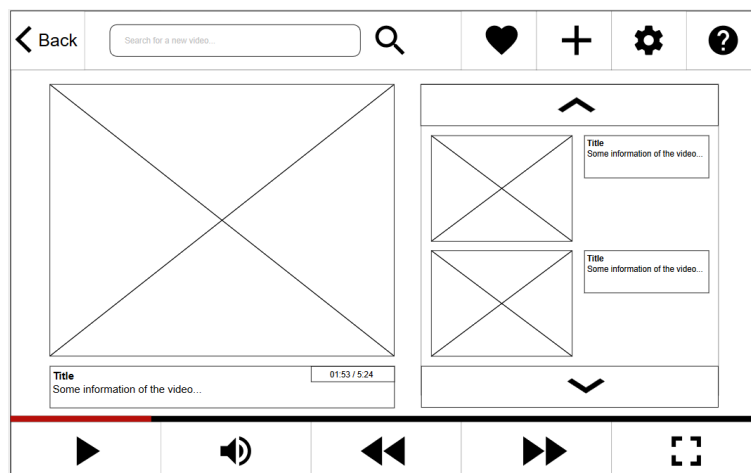

## Forward

The user can fast-forward the video. If the user selects the button “Fast-forward” the number of icons of the button changes from one to two icons. Now he has the opportunity to select the left icon “Fast-forward” or the right icon “Skip video”. If he choose the left button with his eyes the video will be fast-forwarded, while he looks the video until he selects the “Play”-button again. If he selects the right button once the next video starts. If he selects it twice or several times videos can be skipped.

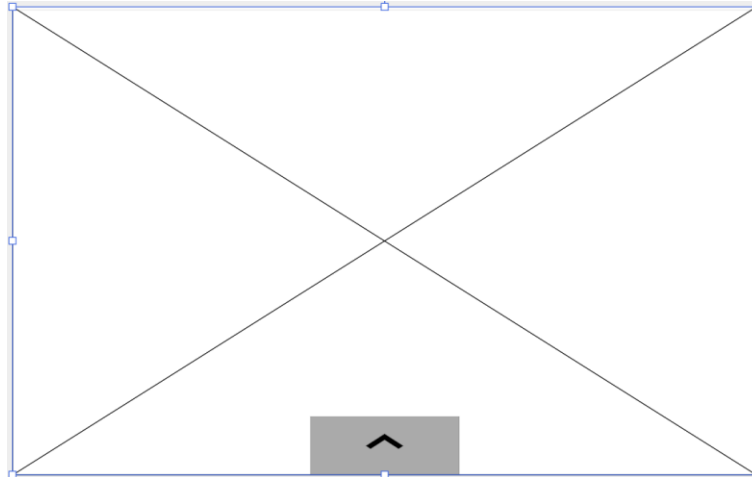

## Rating

The heart symbolizes the rating function. This feature is probably linked to the YouTube rating function. In the beginning the heart is not colored. The user can positively evaluate a video by selecting the heart. Then the heart turns black. That means he likes the video and he knows he has already rated it. Of course, he can also reverse his rating with another click on the symbol.

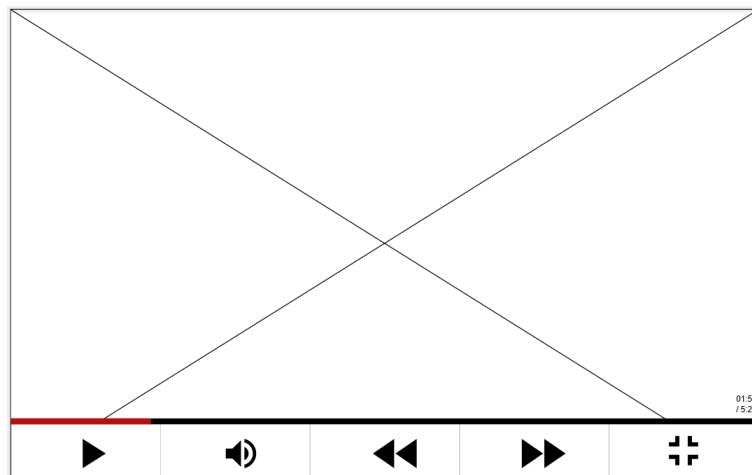

## Fullscreen Mode

All items are faded-out. Only in the bottom of the video frame a gray rectangle with opacity 30% is displayed, which disappears after 5 seconds. Thus, the user knows that he can select the bottom function bar by looking on the bottom of the video frame.

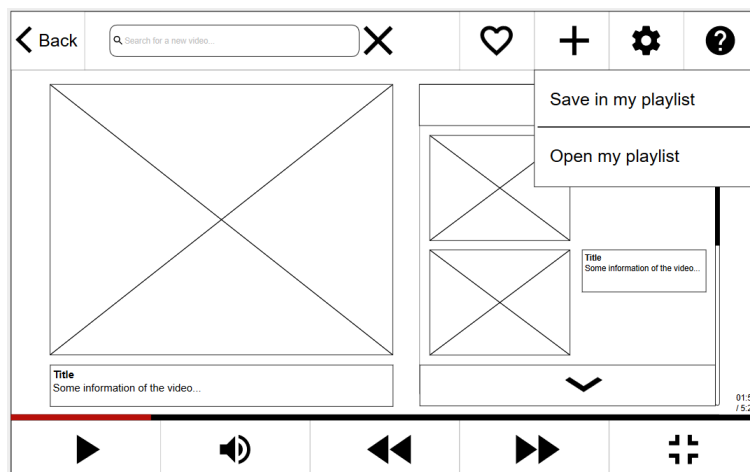

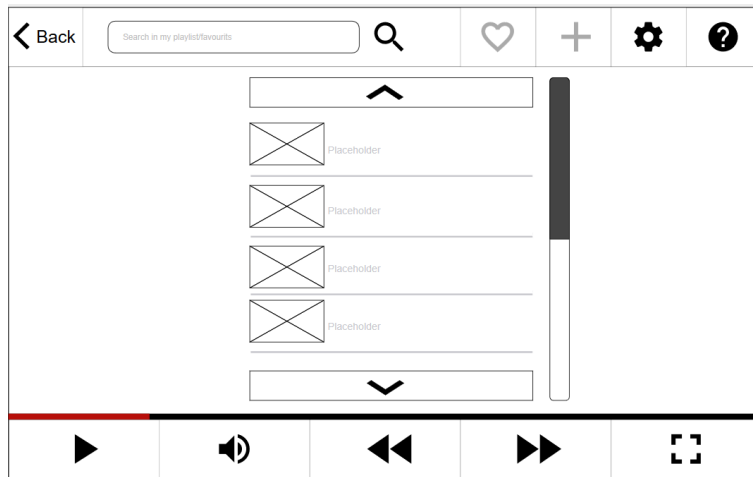

The user can exit full-screen mode by selecting the right-most icon in the bottom function bar.

## Playlist

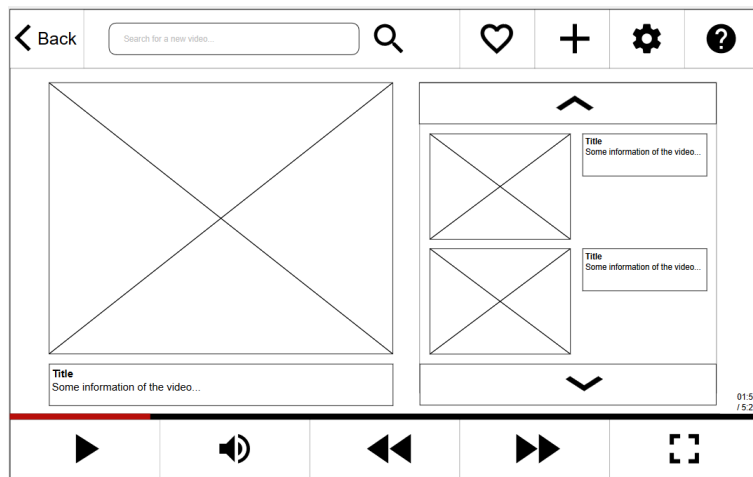

The user has the opportunity to create his/her own playlist. If he wants to add a song to this playlist he can select the icon "Add". After that a small dropdown menu opens and the user can choose if he wants to add the song to the playlist or if he wants to watch his playlist. (Save in my playlist => should be "Add to my playlist")

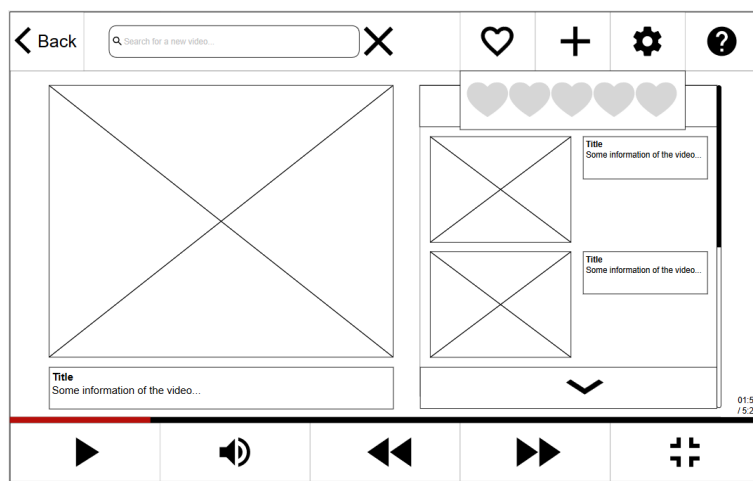

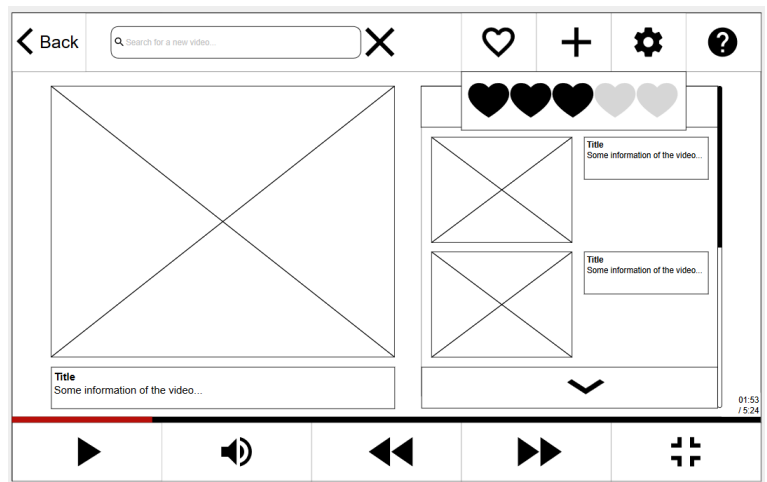

## Other design ideas

New time position:

## Wireframes for the other pages:

Search result page:

Displays the result after you have searched something with the search box. You can scroll down/upwards by looking on the arrow button. If you look on the play button next to each video, the video will start. Additionally one idea is to have the bar on top displayed all the time.
